To Whom It May Concern:

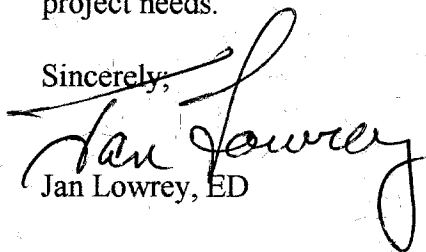

I am pleased to write this letter of recommendation for Diamond D General Engineers, Inc. based on their excellent work here at the Cache Creek Nature Preserve. Diamond D gave us a reasonable bid, started work shortly after receiving a notice to proceed, worked steadily and methodically to complete our project ahead of schedule and on budget.

We were particularly pleased to work with Mr. Spencer Defty and Mr. Kurtis Frailey in the day-to-day progression of work. Although the project had been designed by and was tracked by an engineer, Spencer and Kurtis had to make "design build" decisions on an almost daily basis due to unforeseen complications at the site. All questions of changes to engineered design were brought to me as project manager and discussed pragmatically to allow work to continue. Spencer's recommendations reflected his experience and expertise in his work.

The Cache Creek Conservancy would be pleased to have Diamond D General Engineers, Inc. work for us again on future projects. Ours was a combination hard-point and biotechnical engineered project that required sensitivity to threatened and endangered species, skill in equipment operation, knowledge of biotechnical practices and the commitment to do things right the first time.

Please give Diamond D General Engineers, Inc. every positive consideration for your project needs.

Sincerely,

Jan Lowrey, ED
