Subject: Letter of Recommendation

To Whom It May Concern:

In August of 2007 the South Placer Municipal Utility District issued an emergency design-build contract to Diamond D General Engineering, Inc. to replace a badly corroded 24 inch sewer line that crossed over an environmentally sensitive creek. The District was very concerned about the project because flows of more than 1 million gallons a day of raw sewage had to be diverted from the corroded pipe while it was being replaced through a temporary bypass system that crossed the creek and could not leak any sewage into it. There were also several residences in the immediate project area that could potentially be disturbed.

The District was very pleased with Diamond D General Engineering's performance on the project. The quality of the completed work exceeded our expectations. In addition, Diamond D was highly responsive and approached the project with a sense of urgency, getting in and moving forward to complete it on a highly accelerated schedule. With their engineer they worked through design and construction challenges quickly and implemented practical solutions while keeping everyone informed.

Diamond D also demonstrated a high level of technical competence by constructing and operating the bypass system without any leakage, and by implementing effective methods that maintained the high quality of the water in the creek. We appreciated that Diamond D's crew minimized disturbance to the nearby residents, always wore their safety gear and worked in a safe manner.

In summary, I highly recommend Diamond D General Engineering for construction services.

Sincerely,

South Placer Municipal Utility District

Charles W. Clark, P.E.
General Manager
